

Weather-Resistant Wall Switches

New Wall Switch Option Eliminates Corrosion and Circuit Degradation in Tough Environments

While all Larco wall switches are suitable for indoors and outdoors applications, in environments where extreme rain, snow, sleet and ice can wreak havoc on external automatic door activation devices, Larco's new weather-resistant wall switch can withstand the elements to provide you with consistent door control.

Larco's other door control products, including our activation and safety presence-sensing switch mats, have long been known for their remarkable ability to withstand the elements, including complete submersion in water. Now Larco offers full and reduced-size weather-resistant wall switches to withstand blowing rain, high humidity and pressure washing.

The new weather-resistant wall switches have a completely sealed switch assembly and a rubber boot over the actuating plunger designed to prohibit foreign materials, including dust, rain and humidity, from infiltrating the switch. This design prohibits corrosion and circuit degradation for a switch life designed to exceed 10,000,000 operations.

Larco's new weatherproof wall switches utilize a completely sealed switch assembly and a rubber boot over the actuating plunger to prohibit water or fluids from infiltrating the switch and preventing corrosion and circuit degradation.

Switch Specifications

- Universal Mounting
- Tamper-resistant Design
- High Grade Stainless Steel Cover Plates
- Designed for Service Life Exceeding 10,000,000 Operations
- Radio and Hardwired Options
- Designed to Operate Flawlessly in Temperatures Ranging from 40° C to 85° C

Larco manufactures a full line of automatic door control products, including presence sensing activation and safety mats for automatic doors. Larco's wall switches offer high quality and high durability in an attractive package.
