

Still Buying the Same Old Box?

It's time for a Change!

The Shadow Box:

- Mounting options were limited to surface-mount installations only.
- Round switches mounted on a square box look awkward and unattractive.
- Switch edges are exposed, making it possible for vandals to get behind the exposed edges of the wall switch plate and do damage.
- In harsh weather conditions, exposed switch edges also make it possible for moisture to reach the interior or the box.
- The box is vacuum formed, which limits the ability for a consistently clean and attractive finish

The Universal Box:

- Larco's new universal mounting box can be flush mounted easily by simply slipping the flush ring around the box for a super clean, extremely low profile installation.
- Boxes are adaptable to accommodate round and square switches with a clean attractive appearance.
- Switch edges are recessed into the adapter plate, making it nearly impossible for vandals to reach behind the switch to cause damage.
- Recessed switch edges and water diverter ring inside the plastic adapter are designed to eliminate damage by rain or other weather.
- The box is injection molded for a consistently clean and attractive finish

All These Benefits Plus...

- Universal boxes are constructed of high-durability materials and are designed to last in high-abuse environments.
- Universal boxes accept both round and square wall switches with the specific adapter plate included with every wall switch.
- Universal boxes are available with the same hardwired and radio-controlled options.
- Universal boxes have a lower price!
