

Labor Saver Self-Adhesive Mat System

Save Time & Money with Quick & Easy Mounting

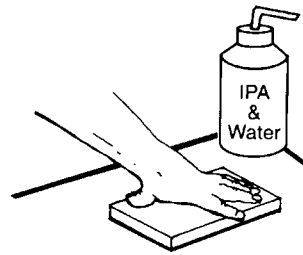

Save time and money with Larco's Labor Saver Self-Adhesive Mat System, the safety mat installation method that reduces expensive labor associated with drilling and fastening trim in place.

In this mounting method, a specially formulated adhesive is applied to either the trim surface or directly onto the mat to hold the mat in place without screws or other metal fasteners. No drilling is required.

Primarily used in applications where mats are placed in recessed areas or on platform walkways, Larco Labor Saver Self-Adhesive Mats can be used in any number of industrial applications, requiring only a smooth mounting surface that is free of grease and dirt.

This mounting method performs well in tough industrial environments, including areas with heavy forklift and pedestrian traffic. Larco Labor-Saver Self-Adhesive mats have excellent long-term holding power, and are ideal for bonding to a variety of floor types, including most metal, sealed wood, plastics, painted surfaces and even concrete.

For more information on saving money with the Larco Labor Saver Self-Adhesive Mat System call 800-523-6996.

Installation is easy with the Larco Labor Saver Self-Adhesive Mat System. Simply prepare the mounting surface by spraying or wiping a 50:50 solution of Isopropyl alcohol and water on the area where you will be installing your Labor Saver Self-Adhesive Mat.

Wipe the surface dry. Once the surface is free of all dirt, oil, or debris, you can remove the adhesive backing and press mat into place.

Once properly installed, Larco Labor Saver Self-Adhesive Mats provide a durable and long lasting mounting solution that's strong enough to withstand heavy forklift traffic without the need for drilling or metal fasteners of any kind.
